

Energy Conservation Report

Energy conservation means saving energy and using it wisely. Energy is very important for our daily life, but natural resources are limited. To create awareness among students, a poster making activity on Energy Conservation was organized.

The main objectives of the poster making activity were:

- To spread awareness about saving energy
- To encourage students to use renewable energy
- To develop creativity and environmental responsibility

Students of Grade 8 participated actively in the poster making competition. They made colorful posters using charts, sketch pens, crayons, and watercolors. The posters showed messages like “Save Energy, Save Future,” “Turn Off When Not in Use,” and “Use Solar Energy.”

The activity helped students express their ideas creatively and understand the importance of conserving energy.

Through this activity, students learned:

- The importance of conserving energy
- Different ways to save electricity and fuel
- How small actions can protect the environment

The poster making activity was very informative and enjoyable. It helped students understand that conserving energy is our responsibility. Such activities motivate students to become responsible citizens and protect natural resources for future generations.
